# Cleaning and Maintenance

Drying water may cause water marks or limescale deposits. Personal care products can also leave visible residue. To prevent this and to ensure long-lasting enjoyment of your taps, showers, baths and basins, please follow the guidelines below for maintaining your products.

## Taps and Showers

### **Daily use**

After use, rinse away any remaining personal care products with water. Wipe taps and showers dry with a soft, dry (hand) towel to prevent marks and deposits caused by drying water.

### **Regular maintenance**

Clean the products with lukewarm water and a soft cloth. If necessary, use a mild natural soap or a dedicated sanitary cleaner. Rinse thoroughly after cleaning and dry with a soft cloth.

Do not use (metal) scouring pads, hard brushes or microfibre cloths, and avoid sharp objects. Avoid corrosive chemicals, acids, industrial cleaning agents, products containing chloride, fluoride or hydrogen peroxide, and abrasive cleaners. Rinse thoroughly with plenty of water to remove any cleaning agent residue. Coated products must not be treated with stainless steel cleaners.

### **Brushed Stainless Steel**

Brushed stainless steel products (without coating) can also be cleaned with a stainless steel cleaner or JEE-O Protect. If using a stainless steel cleaner, always follow the instructions provided with the cleaning product. Do not spray cleaning products directly onto the product; instead, spray onto a soft cloth first. Rub in the direction of the brushed structure on brushed stainless steel surfaces.

### **PVD-Coated Products (bronze, matt gold, dark steel, gun metal)**

A soft cloth or the soft side of a sponge with a mild (natural) cleaning agent is sufficient for degreasing and removing fingerprints. After cleaning, always rinse the product with clean water and dry thoroughly. Residual cleaning agents may damage the surface.

### **Powder-Coated Surfaces (structured black, hammercoated black, clay, sand)**

Again, a soft cloth with, if necessary, a natural mild soap such as green soap is sufficient. Rinse and dry after cleaning. Preventive Maintenance – Including Outdoor Use

Using a stainless steel protector such as JEE-O Protect helps to protect stainless steel preventively against the effects of dirt. After cleaning the tap or shower, apply a thin layer of protective product. Rub in the direction of the brushed structure on brushed stainless steel surfaces.

### **Limescale**

Limescale in the shower head can often be removed by gently moving the rubber nozzles during use. This can be done by rubbing your flat hand over the nozzles briefly.

If the shower head does not have rubber nozzles, it can be cleaned by soaking it in cleaning vinegar for 24 hours. After soaking, rinse thoroughly with plenty of water. The shower head can be dismantled using the supplied key.

### **Aerator (Flow Regulator)**

The outlet of a tap contains an aerator (flow regulator), which can easily be removed and cleaned using the supplied key. Do this regularly to prevent and remove limescale build-up between the aerator and the spout, as limescale may damage a coating. Rinse clean or, in case of limescale formation, soak briefly in natural vinegar diluted with water.

### **Water Softeners**

Water softeners alter the composition of the water. Follow the correct instructions and settings provided by your supplier. Incorrect settings may damage surfaces, resulting in stains and discolouration that cannot be removed.

## Electronic Sensor Taps

The stainless steel or coated surface of JEE-O touchless taps can be cleaned according to the instructions above. Care must be taken to avoid damaging the sensor lens (the deep red acrylic eye in or underneath the spout). Scratches or contamination may affect performance. Cleaning with water and soap is sufficient. Ensure that any cleaning agent residue is removed.

## **Baths and Basins in DADOquartz**

DADOquartz has an extremely dense structure, which prevents substances from penetrating the material easily. Deposits and discolouration therefore almost always remain on the surface. Daily cleaning and maintenance will prevent this.

### ***Daily Use***

After use, rinse away any remaining personal care products with water. Wipe droplets from the edges after use with a soft, dry (hand) towel to prevent marks and deposits caused by drying water.

### ***Intensive Cleaning of Solid White and Coloured Baths***

DADOquartz baths that are solid white or coloured are characterised by their colour running throughout the entire material, rather than forming only a thin top layer. Therefore, white baths may be cleaned more intensively using liquid household cleaning agents or mild abrasive products such as Cif. Dried stains can be treated with a multi-purpose cleaner.

Stubborn stains that remain on the surface may be treated with a light abrasive sponge. Remove such stains within 24 hours. Cleaning agents containing large, hard abrasive particles may cause scratching, resulting in a surface appearance different from adjacent untreated areas. Therefore, preferably use gel or liquid cleaning agents.

### ***Cleaning of Baths with a Coated Exterior***

Baths that are white on the inside and coated on the outside in a bespoke colour may only be cleaned intensively on the inside. The coated exterior surface should be cleaned with a soft cloth and a mild natural soap.

### ***Avoid Industrial Cleaners***

DADOquartz is exceptionally strong and non-porous. Nevertheless, industrial cleaners and chemically aggressive products must be avoided. Do not use products containing ammonia, trichloroethane or methylene chloride, such as paint strippers and paint removers.

**soft brushed  
stainless steel**

JEE-O works with carefully selected solid surface materials. Slight variations in the aesthetic appearance of the product including the colour, may occur after exposure to atmospheric influences such as sunlight, pollution or harmful chemicals. This does not affect the product performance in any manner. Situation specific care and maintenance instructions may apply.
